

This is my comments in regards to the NAB petition 04-160. The petition should be rejected by the FCC.

I pay a monthly subsription fee for XM Radio and enjoy the features it offers. This week I had to drive through Dallas on several trips and found the traffic information invaluable in planning my route and in letting the folks I was visiting when I'd arrive - due to weather and traffic delays. Please keep this feature available to satellite radio listeners - since we are not always able to fine up to date road info on the regular am or fm bands.

thank you,
